

Drobo PC Backup

Backing up your PC to your Drobo® is as easy as using Drobo— Drobo PC Backup now bundled with Drobo

All Drobos are excellent destinations for backup data. Not only is a Drobo® remarkably easy to use, but you can instantly and infinitely grow storage capacity, ensuring that you always have enough space to back up important data.

Drobo PC Backup is the easiest way to back up a Windows-based PC to a Drobo. Once it's installed, five clicks are all it takes to protect your valuable photos, videos, music, documents, and applications. PC Backup automatically detects and backs up incremental file changes, ensuring that your data is always protected. Drobo PC Backup is now bundled with Drobo, Drobo S, Drobo FS, and Drobo B800fs.

Making Backup Easy

If you have just one computer that you need to back up, you can connect your Drobo or Drobo S directly to the computer using a USB, FireWire, or eSATA cable (see Figure 1). Drobo PC Backup ensures that all of your valuable data is automatically backed up to your Drobo.

Figure 1. Direct-attached Drobo

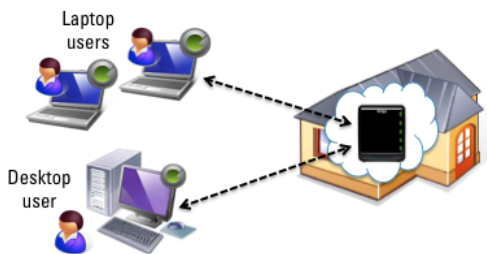

Figure 2. Networked Drobo in Small Office/Small Home

If you have a Drobo FS or a Drobo B800fs connected to your network, you can back up your computer to an available network share.

A networked Drobo allows you to back up multiple computers to their own shares on the Drobo as shown below in a home office or small office (see Figure 2) or small business (see Figure 3).

Fully Automated to Ensure You're Always Protected

Drobo PC Backup automatically detects and backs up incremental file changes. A real plus for people on the move, the Plug & Protect feature detects when you connect your PC to your Drobo and automatically backs up all changes that occurred since the last connection.

Drobo PC Backup lets you automatically keep a secondary backup to protect against theft, fire, flood, or other natural disaster. You can easily choose to back up to one Drobo and simultaneously back up to a second Drobo or other external drive.

Features

Go back in time: Travel back in time to find and recover changes made to files

Incremental: Backs up only the actual changes made to a file saving space on your Drobo

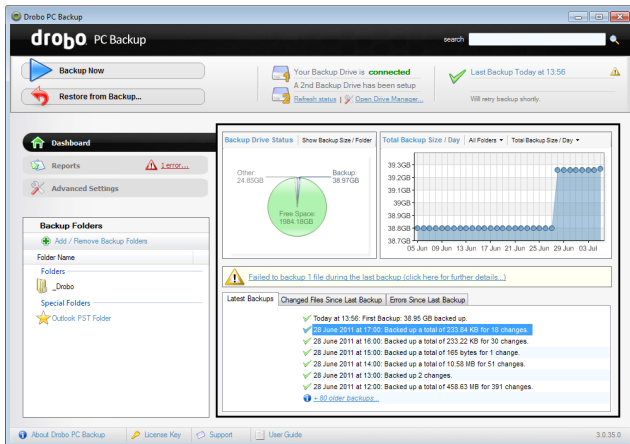

Automatic double protection: Automatically make a secondary backup to protect against theft, fire, or loss of your backup drive

Continuous data protection: Instantly backs up changes to files to ensure you're always protected

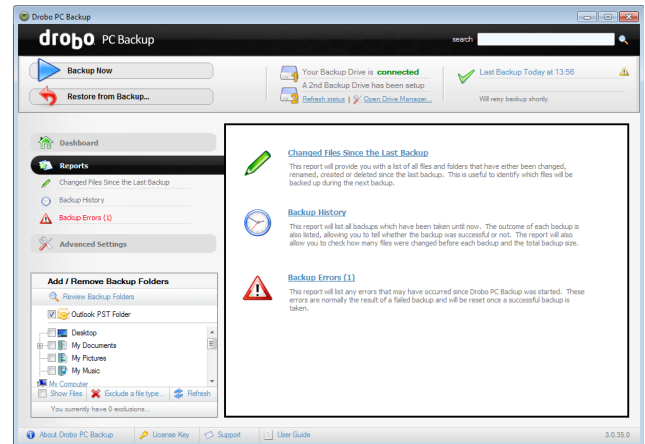

Back up open files or files in use: Integrates with Microsoft Volume Shadow Copy Service (VSS) technology to back up files currently open or in use

Plug & Protect: Detects and automatically backs up changes to files when you connect your computer to your Drobo

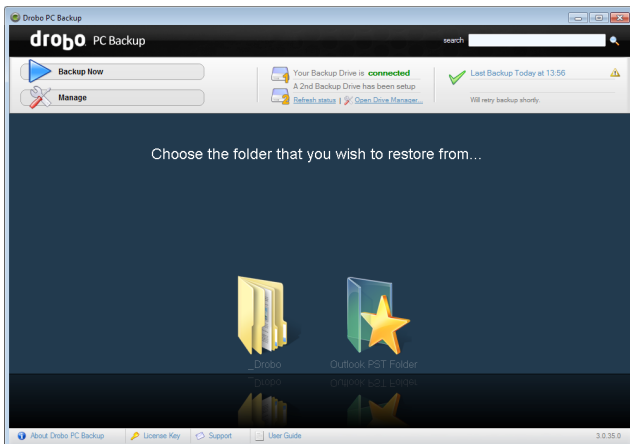

Back up to any Drobo: Works seamlessly with both direct-attached and networked Drobo arrays
