

Serviio is a free Digital Living Network Alliance (DLNA) media server application that is installed directly on a Windows computer and allows streaming of media files (music, photos, or videos) across the network to any DLNA-certified device including the Microsoft Xbox 360 game console. This guide explains how to configure the Serviio media server to stream media from a PC-connected Drobo® or Drobo S to an Xbox 360.

NOTE: The latest version of Serviio is available as a free download directly from the Serviio website (<http://www.serviio.org>).

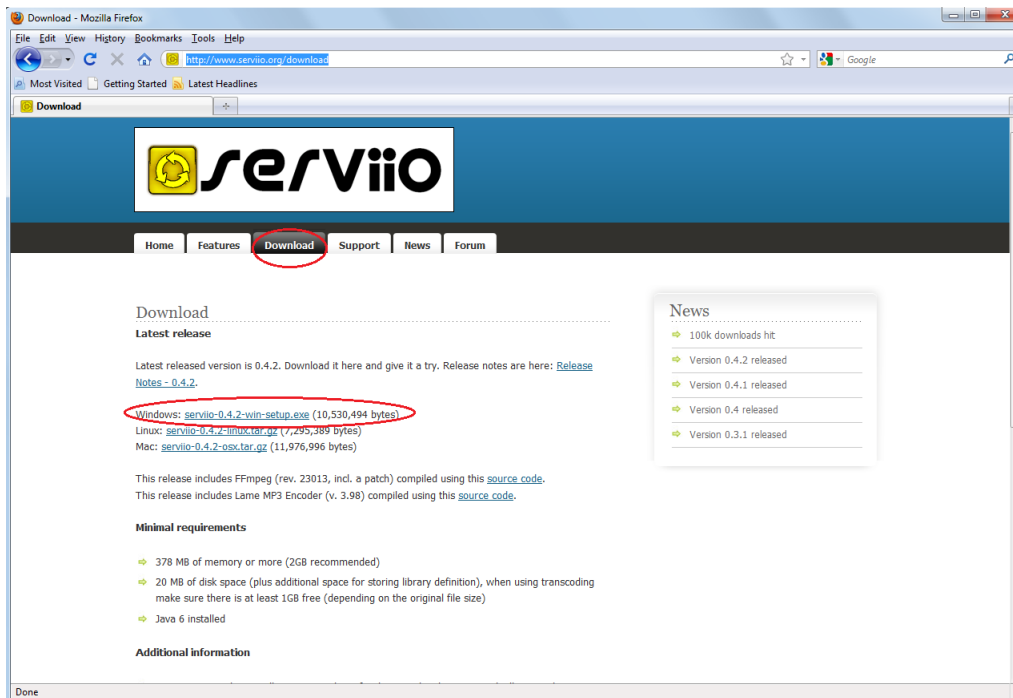

System Requirements

- Drobo or Drobo S storage array
- Windows XP, Windows Vista or Windows 7 computer
- Serviio media server application v0.4.2 or higher
- Microsoft Xbox 360 game console
- Wired or wireless network connecting devices

STEP 1

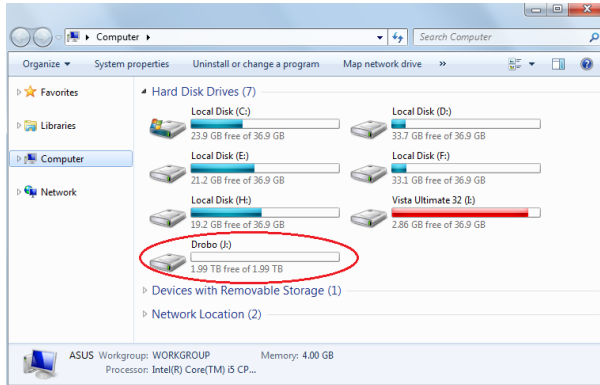

Visit the Serviio website (<http://www.serviio.org>) to download and install the latest version of the Serviio media server application.

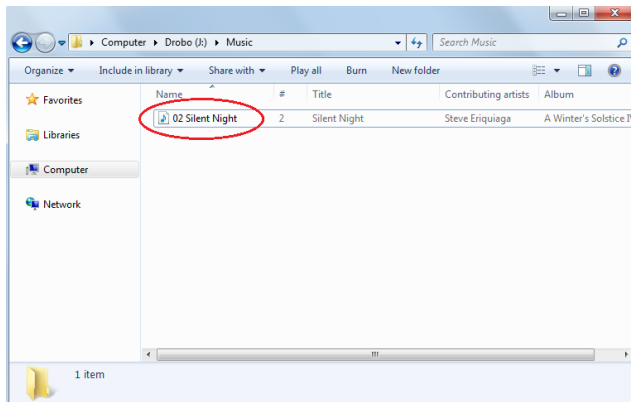

STEP 2

If you've already created media folders on your Drobo, you can skip to Step 4. Otherwise, navigate to a mounted Drobo or Drobo S volume and create three new folders titled **Music**, **Photos**, and **Videos**.

STEP 3

Once you've created these folders, add all the videos, photos, and music you wish to share into each folder respectively. In this example the song *Silent Night* was added to the **Music** folder.

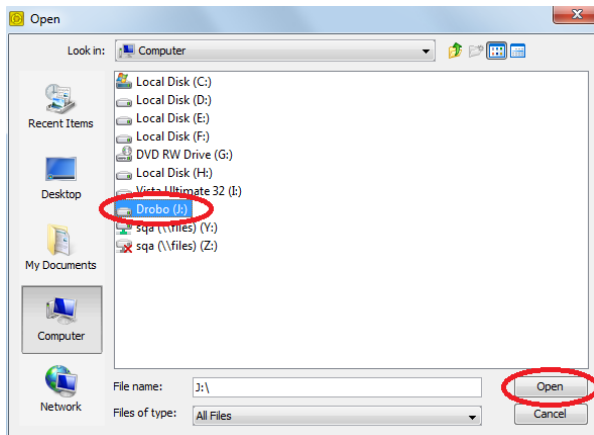

STEP 4

Open the newly installed Serviio application, navigate to the **Library** tab and select **Add local**. Select **Browse** from the Add Media Source window that appears.

STEP 5

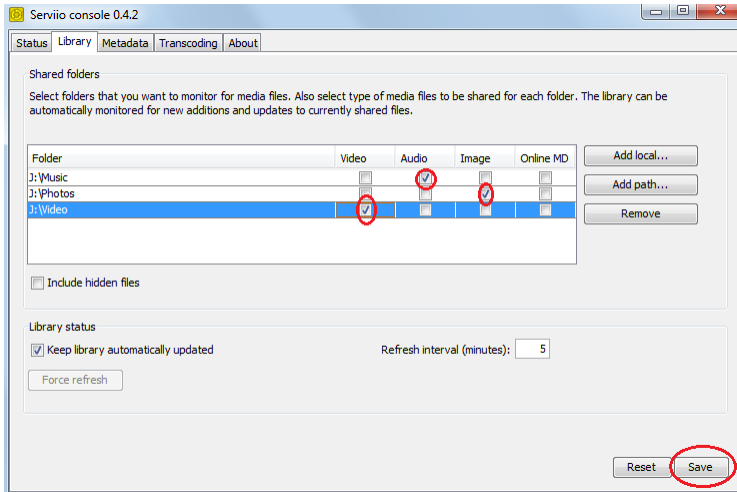

Select **Drobo > Open** to open a window that shows available folders on your Drobo. Select **Music > Open** and repeat this step for the **Photos** and **Video** folders.

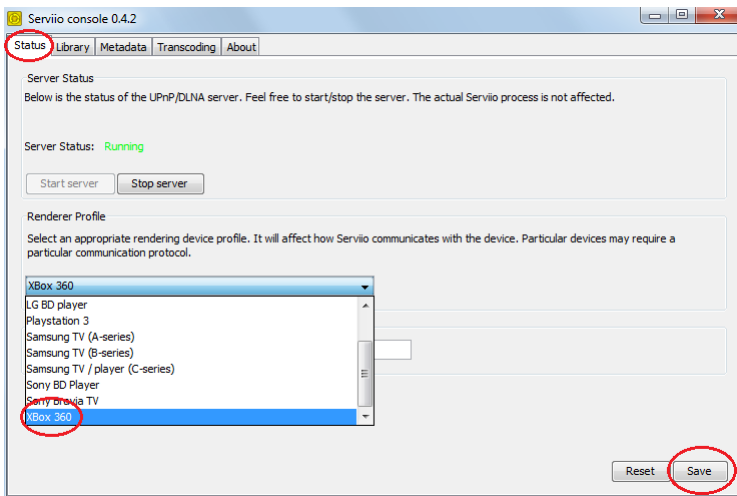

STEP 6

The Library tab should now show the three mounted **Music**, **Photos**, and **Video** folders. Select the appropriate media type as show below and click **Save** to retain the settings.

STEP 7

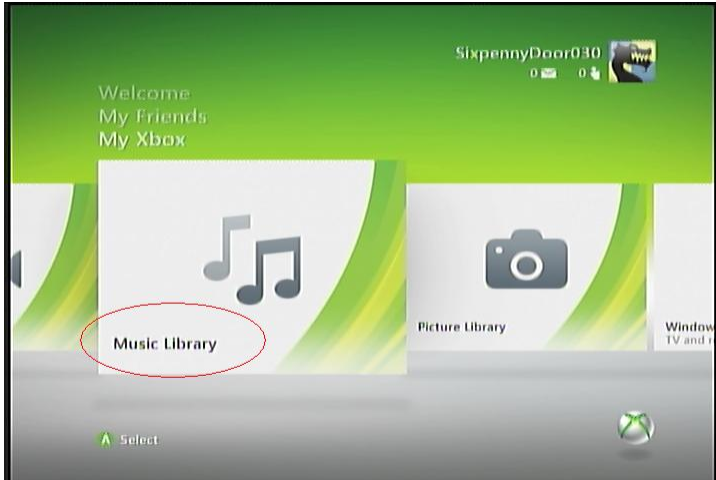

Select the **Status** tab in the Serviio console. Then select **Xbox 360** in the **Render Profile** scrolling list, and click **Save**.

STEP 8

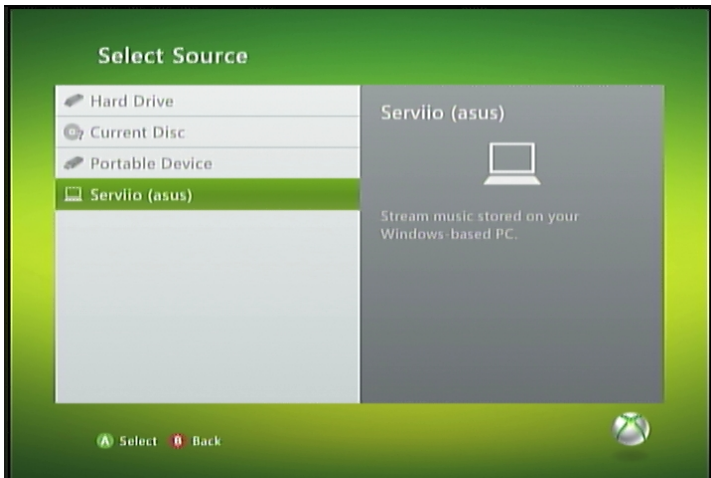

Go to the Xbox 360 console, navigate to **My Xbox**, and select **Music Library**, **Picture Library**, or **Video Library** depending on the type of media you want to view or play.

STEP 9

When you are prompted to select a source, select **Serviio**.

NOTE: If you don't see the Serviio media server, select **Test Connection** to ensure that the Xbox 360 game console is connected to the Serviio media server.

STEP 10

Recently added media from your Drobo should now be visible in the Serviio media server on the Xbox 360. Select the item you want to play or view. The sample shown below shows the song *Silent Night* listed under **Songs** in the **Music Library**. You are now streaming media from your Drobo to your Xbox 360. Enjoy!
